

**IN THE ABSTRACT:**

Please delete the Abstract of The Disclosure in its entirety and replace it with the one that is attached hereto.

**REMARKS**

Claims 1-10 are all the claims pending in the application. This Amendment adds claim 11, and addresses each point of objection and rejection raised by the Examiner. Favorable reconsideration is respectfully requested.

Applicants thank the Examiner for initialing the information disclosure statement, but respectfully request acknowledgement of the priority document filed January 12, 1999.

As a preliminary matter, the Examiner objected that the Abstract does not include reference numerals keyed to the main features. A new abstract is set forth on a separate sheet attached hereto, to which reference numerals have been added.

The Examiner objected to for Fig. 1 not showing "one or both spring parts 24" on socket 20. From the orientation of Fig. 1, conductor contact portions 24 are on an underside of the flange 22 of the socket 20, making illustration difficult. Applicants respectfully call the Examiner's attention to conductor contact portion 24 in Fig. 2. Fig. 2 identifies both socket 20 and "spring part" 24, and is described "as a view of a socket as seen in a direction of arrow A of Fig. 1." Applicants respectfully request the Examiner withdraw the objection, as the present illustration of the conductor contact portion is clear and unambiguous.
